section 6

Standard Normal Distribution

Dots set = population

n=50

of mean for difficultation of Proteinstin

Somples Mean

X

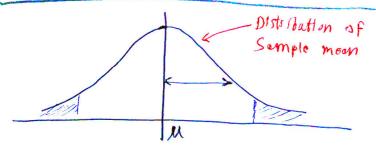

Age

Stondond Normal () with of cool with butin

M population

 $Z = \frac{X - M}{\sigma}$

Mean of Sumple mean Distribution is the Same as mean of population

 $SE = \frac{6}{\sqrt{n}} \rightarrow Standard Erron$

SE > 6 of Somple mean curve

6 > 6 of Population curve

n > number of Sample

M -> mean of population

The Somples when I a function X is a function X in X in X in X of X in X

P(Z) -> P- Volue
